

**PRESS RELEASE**

**For Immediate Release**

**Corgenix to Exhibit AspirinWorks® Test  
at Denver Diabetes Expo**

**DENVER, Colo. — February 25, 2008** — Corgenix Medical Corporation (OTC BB: CONX), a worldwide developer and marketer of diagnostic test kits, will be exhibiting its AspirinWorks® Test, booth #312, at the Denver Diabetes Expo, Colorado's largest gathering dedicated to diabetes prevention and management. The Expo is being held in exhibit Hall F at the Colorado Convention Center from 9:00 a.m. - 4:00 p.m. on Saturday, March 1, 2008.

Recent clinical research<sup>1</sup> has noted an increased prevalence of aspirin resistance among diabetic patients (Type II). During treatment with 81 mg aspirin, urinary levels of 11-dehydro thromboxane B<sub>2</sub> levels were significantly higher in diabetic patients than non-diabetics. A significant reduction in resistance rates were noted with 325 mg of aspirin treatment as compared to 81mg.

“We know that not all individuals respond the same to the same dose of aspirin, and aspirin resistance is a concern of anyone taking aspirin to prevent heart attack and stroke,” said Corgenix’ Clinical Affairs Director Gordon Ens. “This is a great opportunity for the diabetic community and related medical professionals to learn more about the issue of aspirin resistance and how it may potentially impact management of type II diabetes.”

AspirinWorks is a simple urine test that determines the effect of aspirin on platelets by measuring the level of thromboxane production (aspirin’s target). The higher the levels of thromboxane, the stickier the blood platelets, and the less impact the aspirin is having. This crucial information allows physicians to individualize a patient’s therapy.

---

<sup>1</sup> Gurbel PA, et al "Effects of Diabetes on the Prevalence of Aspirin Resistance During Low Dose Aspirin Therapy" ACC meeting 2007; Abstract 1019-179.

The AspirinWorks Test, which was launched in the United States in June 2007 following FDA 510(k) clearance, is now available nationwide through major medical reference laboratories as well as direct to consumers through HealthCheckUSA ([www.HealthCheckUSA.com](http://www.HealthCheckUSA.com)).

Unlike other platelet tests, which require freshly drawn blood that must be evaluated within at least 4 hours, the AspirinWorks test only requires a urine sample that can be obtained in any doctor's office or patient service center, making the test easy for both physician and patient. Physicians and laboratories interested in ordering the test can call 1-800-729-5661 x180, or e-mail: [info@aspirinworks.com](mailto:info@aspirinworks.com). More information is also available at [www.aspirinworks.com](http://www.aspirinworks.com).

The Denver Diabetes Expo event features free screenings and exercise demos, guest celebrities, interactive educational sessions, a diabetes bookstore, El Mercadito Latino/Latin Marketplace, and exhibits featuring the latest products and services for diabetes awareness and management.

#### **About Corgenix Medical Corporation**

Corgenix is a leader in the development and manufacturing of specialized diagnostic kits for immunology disorders, vascular diseases and bone and joint disorders. Corgenix diagnostic products are commercialized for use in clinical laboratories throughout the world. The company currently sells over 50 diagnostic products through a global distribution network. More information is available at [www.corgenix.com](http://www.corgenix.com).
