### **For Immediate Release**

## **CORGENIX SIGNS TECHNOLOGY LICENSING AGREEMENT WITH JAPANESE GOVERNMENT**

### *AGREEMENT PROVIDES CORGENIX EXCLUSIVE WORLDWIDE RIGHTS TO DIAGNOSTIC TECHNOLOGY MEASURING SERUM BIO-MARKER FOR CARDIOVASCULAR INFLAMMATION*

DENVER, Colo. — March 18, 2008 — Corgenix Medical Corporation (OTC BB: CONX), a worldwide developer and marketer of diagnostic test kits, has executed a licensing agreement with the Okayama Prefecture Industrial Promotion Foundation covering new diagnostic technology for serum amyloid protein (SAP), an important serum bio-marker for cardiovascular inflammation. The technology was developed by Dr. Eiji Matsuura at the University of Okayama Graduate School of Medicine, Dentistry and Pharmaceutical Sciences.

Corgenix has had strategic alliances with researchers and academic institutions in Okayama, Japan, since 2001. The Company's patented AtherOx™ technology was developed in collaboration with researchers from the University of Okayama. This new agreement opens additional avenues of technology and strengthens the collaboration with the Okayama Prefecture (a prefecture is the equivalent of a state) aimed at developing innovative and important diagnostic products in the future.

“We are pleased to expand our collaborative relationships in this region. Our alliances have already produced several exciting products, and gaining access to the SAP technology is very promising for our Company,” said Douglass Simpson, Corgenix President and Chief Executive Officer. “Serum amyloid proteins are stress proteins typically elevated in bacterial and viral infections, and have been shown to be related to cardiovascular disease as well.”

The agreement with Corgenix is the first one established between the Okayama Prefecture Industrial Promotion Foundation – a government agency promoting research and development among industry, universities and governments – and a U.S. company. Under the terms of the agreement, Corgenix has the exclusive rights outside of Japan to further develop the serum amyloid technology, including adapting to research and clinical diagnostic products.

### **About Corgenix Medical Corporation**

Corgenix is a leader in the development and manufacturing of specialized diagnostic kits for vascular diseases, immunology disorders, and bone and joint disorders. Corgenix diagnostic products are commercialized for use in clinical laboratories throughout the world. The company currently sells over 52 diagnostic products through a global distribution.
